492 Weekly Report 22

Team: Dec15-13
Date: 11/14/15
Advisor: George Amariucai
Project: Ad Hoc Mobile Network
Members: Cole Cummings
Cody Lougee
Ethan Niemeyer

Summary

Changed the architecture of the application to make it more extensible and maintainable. The goal is to make it easier to connect the front and back ends.

Group Meeting Notes

Too busy to meet this week.

Advisor Meeting Notes

Talked about the issues we were having and what we think we can accomplish by the end. Basic code for encryption is there, but we may run out of time to add it. George said it would be ok if encryption didn't make it in.

Accomplishments

Integrated some delegates, the front end can now be populated with some elements from the back end but chat is not yet possible.
Found a program to increase the performance of the virtual machines.

Plans For Next Week

Continue to hook up front end and back and resolve issues that are created by the changing architecture

Pending Issues

A lot of stuff is broken right now, if we're being totally honest

Individual Contribution

Team Member	Hours	Descriptions
Cole Cummings	0	I had 2 other exams this week and had to go home over the weekend for family stuff
Cody Lougee	3	Cleaned up old code. Improved the performance of virtual machines.
Ethan Niemeyer	2	Heartbeat now working

Total Contribution

Team Member	Hours
Cole Cummings	71
Cody Lougee	70
Ethan Niemeyer	68
