492 Weekly Report 20

Team: Dec15-13
Date: 10/31/15
Advisor: George Amariucai
Project: Ad Hoc Mobile Network
Members: Cole Cummings
Cody Lougee
Ethan Niemeyer

Summary

This week was focused on pulling the app together.

Group Meeting Notes

Still working on fully integrating all the code, fixing bugs, and finishing up what is left. What is left is a few miscellaneous UI elements, finishing and connecting backend code, and polishing the app.

Advisor Meeting Notes

Mostly discussed what was left to be done.

Accomplishments

Found out how to connect up multiple computers running VMware so that our simulated phones can connect. This allows us to create a bigger virtual network.

Plans For Next Week

Get chat table updating and have a function to add messages to make testing easy for Ethan

Pending Issues

Updating the chat in real time is pretty broken, may have to change how the table is implemented

Individual Contribution

Team Member	Hours	Descriptions
Cole Cummings	3	Put in a table view for Friends list and for chat, chat does not need core data objects, some trouble with updating the table in real time
Cody Lougee	4	Investigated further if we could acquire iDevices somehow and how to network multiple computers with VMware to run more simulated phones.
Ethan Niemeyer	4	Integrating new parts

Total Contribution

Team Member	Hours
Cole Cummings	67
Cody Lougee	63
Ethan Niemeyer	62
